# Version Changes

**Version:** 21.10.0
**Number of Changes:** 13

## Cool Features

Added the ability to send documents to be electronically signed from Images via Formstack

The user may now send Broadcast J-Mail messages to specific locations.

Introducing the new **J-Portal**, a **web-based client portal** for both you and your customer. The J-Portal will offer your customer easy access to policy information, payment options, help filing a claim, and the ability to generate ID Cards and Certificates of Insurance from anytime, anywhere.

## Other Changes

Suspenses in agency transaction log will no longer not have the users name associated.

When emailing a personal lines or commercial lines ID card from the policy, Jenesis will now make a note at the policy level and not just at the client level.

Under the customer profile notifications and view, it now shows text message campaigns sent as well as email campaigns.

We have created 4 new Expiration reports Personal lines  by user and by Producer as well as Commercial lines by user and producer

Updated Acord 28 to prefill the name field with business name if it is populated. Otherwise, prefill with first and last name.

When creating a certificate of insurance, Jenesis will not automatically check the Policy checkbox if there is a General Liability policy on the certificate.

We have added the ability to filter the Production>> Misc>>New Business Receipt List by Location / User / and Company

We have added a Drilldown capability to the Fees by Agent Report.

If a year model is 2019 or newer, the VIN field will no longer have a space in the field and there will not be a VIN to choose from. If the year model is 2018 or older, there will be a list of partial VIN's available to choose.

After sending email, now in View Notes
